## Management of the various types of Degradable and Non-Degradable waste at the campus

There are different types of waste that we produce on an annual basis. It comes in many forms; however, we can mainly divide them into two categories:

- Biodegradable Waste
- Non-Biodegradable waste.

Biodegradable materials are those, which degrade or break down in a natural manner. In other words, their decomposition happens with the help of natural agents like sunlight, microorganisms, water, ozone and more which turns it into organic manure.

Non-biodegradable substances are materials which do not degrade easily. As they are synthesized and do not occur naturally, degradation is impossible with these products. Therefore, when they stay in the ecosystem for a long period and do not decompose, they harm our environment.

The Institution adopts several measures for management of the various types of degradable and non-degradable waste at the campus. Some of them are mentioned below:

1. The Institution provides small dustbins in every class room and faculty rooms and encourages students and faculties to throw their waste specifically in the dustbins.
2. DME has ensured installation of big dustbins near the Canteen area to promote amongst students the habit of disposing waste in bins.
3. The Institution also encourages the use of 2 different dustbins i.e., Green Dustbin and Blue Dustbin. The same is done to segregate the waste.
4. At each floor of the institute, near the washrooms big dustbins have been kept.
5. Incinerator are used for waste management.

## USE OF DEGRADABLE WASTE

Due to the canteen in the college premises itself; there is a lot of degradable waste generated. This includes, vegetable peels, leftover food etc. All this waste is collected and used in the compost pit dug in the college itself. This not only helps in proper management of waste but also aids in the growth of other plants as the compost is later
